YOUR PRESENCE

OZONE · UV-C · THERAPY

ENVIRONMENTAL WELLNESS • PERSONAL WELLNESS • NUTRITION

COMPANY PROFILE

Who We Are

Your Presence (Pty) Ltd is a South African company offering solutions across three complementary areas: environmental wellness, personal wellness, and nutrition. Our core technical specialisation is ozone and ultraviolet (UV-C) technology for air and water treatment, alongside selected wastewater and effluent treatment applications. We also offer wellness therapies and nutrition products to support individuals seeking a more holistic approach to wellbeing.

The company commenced operations in 2005 and was registered in 2018. Based in North Riding, Randburg, Johannesburg, Your Presence has experience in supplying, designing, manufacturing, servicing, repairing and maintaining ozone-generating and ultraviolet equipment. Our range includes standard, custom-designed and OEM products for domestic, commercial, industrial and specialist applications.

Our Three Areas of Focus

1. Environmental Wellness – Ozone & UV-C Solutions

We supply ozone generators, UV-C systems and associated technologies for air and water treatment. Depending on the application and system design, these technologies can form part of solutions for water sanitation, air treatment, odour management, microbial control, post-harvest applications and selected wastewater treatment processes.

- Ozone generators for air and water applications, selected and sized to suit the intended use, water flow or treatment capacity.
- UV-C equipment for air and water applications and integration into building and facility hygiene programmes.
- Ozone and UV-C equipment, including custom-designed and OEM solutions.
- Additional technologies including infrared heaters for industrial and commercial use, post-harvest solutions and medical infection-control applications.

2. Personal Wellness – Therapies & Equipment

Your Presence also offers wellness-related equipment and therapies. These include ozone therapy equipment, including the Ozone Health Capsule manufactured for use by wellness and health practitioners, as well as Tourmaline BioMat sessions and holistic therapies such as Kinesiology and NOT techniques.

Our personal wellness offering is intended to complement the environmental wellness side of the business by making selected wellness products, equipment and services available to individuals and practitioners. These offerings are not presented as a substitute for medical diagnosis or treatment.

3. Nutrition & Financial Empowerment – Herbalife

Your Presence includes Herbalife nutrition products as part of its broader wellness offering. We also share information about the Herbalife business opportunity for people who are interested in exploring a product-based business and an additional income opportunity. Product information and business-opportunity discussions can be provided separately to suit the needs and interests of each individual.

What We Do – Technical Applications

Our work centres on natural oxidation and complementary treatment technologies. Depending on the application, system design and operating conditions, these technologies can be used to:

- Treat water through oxidation and sanitation, including applications involving selected contaminants such as iron and manganese.
- Address odours and air-treatment requirements in residential, commercial and industrial environments.
- Support microbial-control and hygiene programmes in buildings and specialist facilities.
- Assist with post-harvest applications involving fruit, vegetables, fish and meat.
- Support biological wastewater treatment processes, including nitrification, denitrification and clarification in suitable systems.
- Provide treatment options using ozone, UV-C and, where appropriate, membrane systems.

Applications Across Multiple Sectors

Our technical solutions are relevant to a wide range of domestic, commercial, industrial and specialist environments. Examples of applications include:

- Healthcare: hospitals, clinics, ICU and surgery wards, doctors' rooms, medical suites, ambulances, mobile medical facilities, mortuaries and forensic pathology facilities.
- Hospitality and public facilities: hotels, guest rooms, B&Bs, bars, restaurants, lounges, lobbies, change rooms, ablution areas, shopping centres and public transport.
- Commercial and residential: homes, offices, boardrooms, high-rise buildings, gyms, schools, crèches and swimming facilities.
- Food, agriculture and cold-chain environments: butcheries, fish shops, abattoirs, meat and produce cold rooms, fruit and vegetable stores, chicken sheds, animal sheds and food transport vehicles.
- Industrial and environmental: industrial water treatment, sewage and effluent treatment, waste areas, garbage disposal areas, container treatment and odour-management applications.

Assessment, Design & Technical Support

Company activities include assessing air quality for microbial and carbon dioxide (CO_2) levels, with reference to indoor-environment concerns such as sick building syndrome. We supply a range of ozone-generator types, including UV-C ozone generators and cold-corona units, for appropriate applications.

Where required, building treatment may be considered after cleaning has been completed, as part of a broader programme to address pathogens that may remain within a building. Any such work should be assessed and planned for the site, application and appropriate safety procedures.

Your Presence has access to consultants, microbiologists and food technologists to support relevant projects and applications.

Wastewater Treatment – Bio-Bee

The Bio-Bee biological wastewater treatment process is described as a robust and environmentally considerate option, with low energy consumption and low plant maintenance requirements. It is intended to produce clear, odourless water that may be recycled for suitable uses such as irrigation, watering holes for game, dust suppression and vehicle washing, subject to the quality requirements of the intended reuse.

Our approach is to match the appropriate product, technology or service to the individual need and application — from personal wellness offerings to domestic, commercial, healthcare, industrial and wastewater treatment projects.
